  - Filters In Brand Content Monitoring

There are various screens across the i2o Retail Advisor Platform where you can segment data by making a customized product selection. This is done through the filter function that is accessible across the following screens, organized by i2o subscription type below.

Growth Accelerator

- Marketplace Monitoring
  - Price Monitoring
  - Exception Management
  - Brand Content Monitoring

- Sales Insights
    - Sales Analysis Insights
    - Ecommerce Sales Equation
    - Product Alerts & Exceptions
- Marketplace Operations
    - Marketing
    - Operational Reports

Brand Protector

- Benefits
- Marketplace Monitoring
    - Price Monitoring
    - Exception Management
    - Brand Content Monitoring

Brand Forecaster

- Forecast & Inventory
    - Supply Worksheet
    - Analytics
    - Purchase Orders

About The Filter Function

To find the filter function, navigate to any of the pages listed above. At the top of the screen on the right-hand side, click on the Filter Icon to open a menu with (2) tabs:

1. Filters
2. Presets

Using The Filters Tab

When you click on the **Filter Icon**, the default tab view is the **Filter** screen. The filter parameters are broken down by two main filter types with unique options for each:
Quick Filters, including but not limited to:

- Platform (e.g., Amazon)
- Region (e.g., US)
- Product Code (e.g., ASIN)
- Short Name (e.g., Black Headphones)

Other Filters, including but not limited to:

- Brand
- Category
- Model Number
- UPC
- Product Condition
- Product Status
- Parent Product ID (e.g. PASIN)
- Vendor Code

> The Filters and Calendar Function are an effective way to improve i2o data visualization for contextual analysis and generated insights.

How To Create A Custom Preset Filter

When you click on the **Filter Icon**, the default tab view is the **Filter** screen. On this screen, you can create a customized preset filter using any parameters.

1. Navigate to any screen with the filter.
2. Click the **Filter Icon**.
3. In the first tab, select your filter criteria. Click **Save as Preset**.
4. You will be taken to the next tab labeled **Presets**. Type a name for your preset filter and click **Save Preset**.

How To Locate Existing Preset Filters

You may access Preset Filters from most screens. In cases where there are a high number of saved preset filters, you may also search the library to locate them quickly.

1. Navigate to any screen with the filter.
2. Click the **Filter Icon**. The default tab view is the **Filter** screen.
3. Click on the second tab labeled **Presets**. You will see all created presets below the search bar.
4. Select one of your preset filters and click **Apply**.

How To Edit/Delete Existing Preset Filters

You may access Preset Filters from most screens. In cases where there are a high number of saved preset filters, you may also search the library to locate them quickly.

1. Navigate to any screen with the filter.
2. Click the **Filter Icon**. The default tab view is the **Filter** screen.
3. Click on the second tab labeled **Presets**. You will see all created presets below the search bar.
4. Select one of your preset filters:

a. To edit: Click on the pencil icon to open the menu of options and make your updated selections. Click **Update Preset**.
b. To delete: Click on the trashcan icon to open a message window. Click **Delete**.

Filter Criteria By Screen
