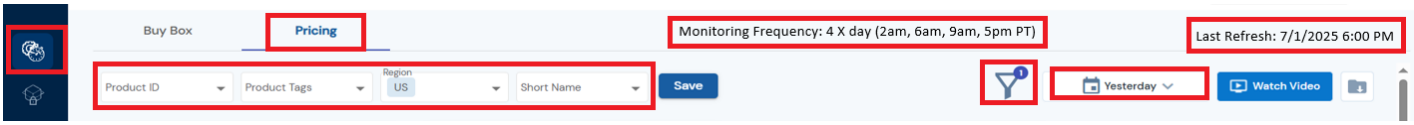
Pricing

Overview

Price Monitoring enables you to track price drops across marketplaces, monitor product pricing, identify pricing trends, detect Buy Box losses, flag MAP (Minimum Acceptable Price) violations, and more. With interactive KPI cards, ML-powered product matching and price drop detection you can efficiently analyze and act on pricing performance.

How to view product Pricing details

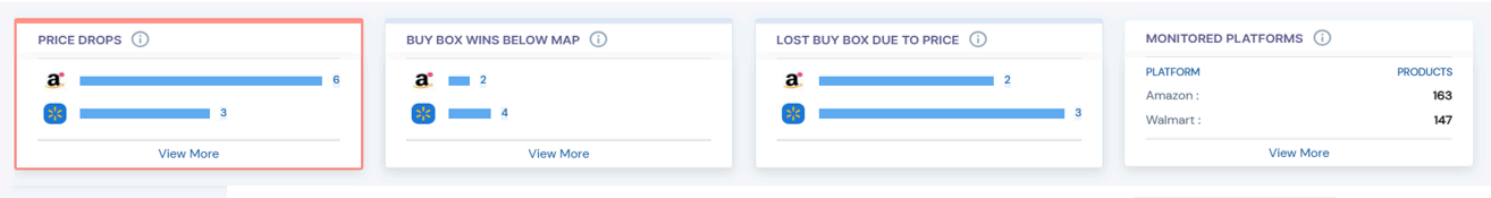
1. Navigate to the Price Monitor > Pricing.
2. By default, the data on this screen is loaded for the latest day. To view data for a different time period, select time range from the date drop-down menu.
3. Click on the filter icon to set parameters for the data you want to view or use the quick filters on the screen to select from desired Brand, Region, Short Name or UPC, and wait for the data to load.



4. View the Monitoring Frequency at the top.
5. Click on prize drops to get a filtered list of products that have had a price drop.
6. Click on any of the Pricing KPI cards to update the view details table below with relevant data.
7. View the table which gives product level details.
8. Click on the Export icon to export the report.

Pricing cards

Find four KPI cards on the Pricing screen. Clicking on any card updates the product details table with relevant data:



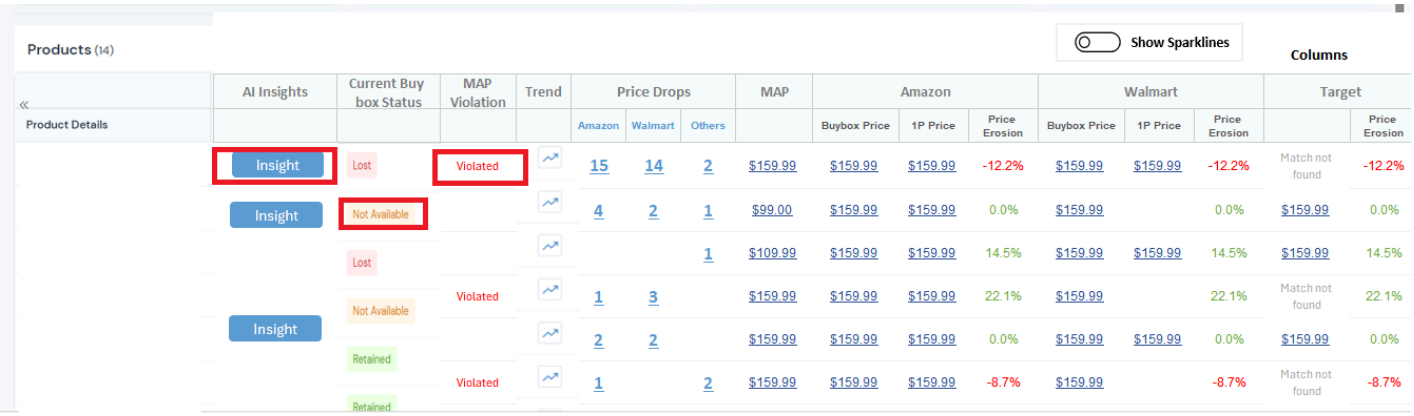
- Price Drops: Displays instances of price drops on any given product in a marketplace.
- Buy Box Wins Below MAP: Shows the number of Buy Box wins below MAP that were detected across all monitored marketplaces on a given day.

- Lost Buy Box due to Price: Indicates instances of lost buy box during a selected day due to price drops by other sellers.
- Monitored Platforms: Lists all enabled platforms being monitored for the client, along with the number of activated products being tracked on each platform for that specific day.

How to View Product Details Table

The Product Details Table helps you analyze product-level pricing trends across various marketplaces.

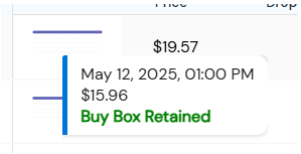
1. Navigate to Price Monitoring > Pricing.
2. Scroll down the page to locate the View Details table.
3. Each row in the table is for a single product. The product details column has Product Name, ASIN, Product Icon, Platform, and Region.



4. Click on the Insights button from AI Insights column to open the AI Pop-up that shows LLM Insights of the concerned product.
5. Click on the status card from Current Buy box Status column to open the buybox details filtered for the selected product.
6. Click on the MAP violation card to open the MAP Violations of the selected product. Click here to read more.
7. You can also extract the following insights from the table:
    a. Lowest Price Platform: Displays the name of the platform offering the lowest price for the product on the selected day.
    b. For each of the top 5 marketplaces where the product is being monitored, you can view:
        i. Buy Box Price (in dollars). Click on the price to navigate to the original PDP.

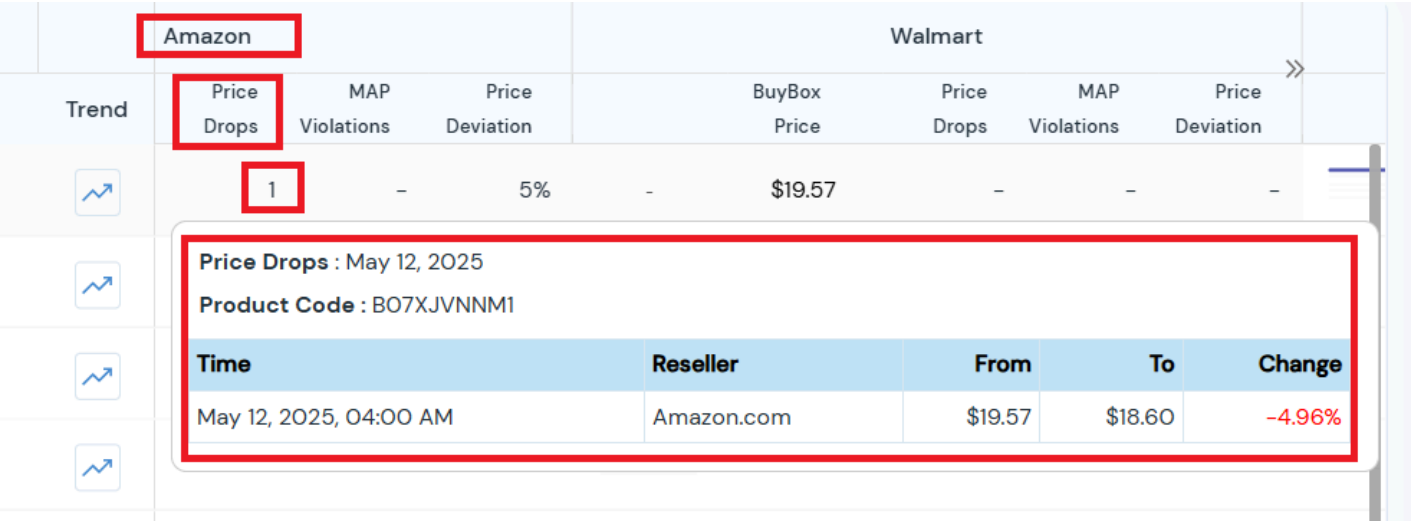
        ii. Number of Price Drops
        iii. Buy Box Sparkline: A 7-day sparkline for each marketplace, showing daily buy box prices with 7 data points. Hover over any point on the sparkline to view the exact date, time, price and the

Buy Box status.

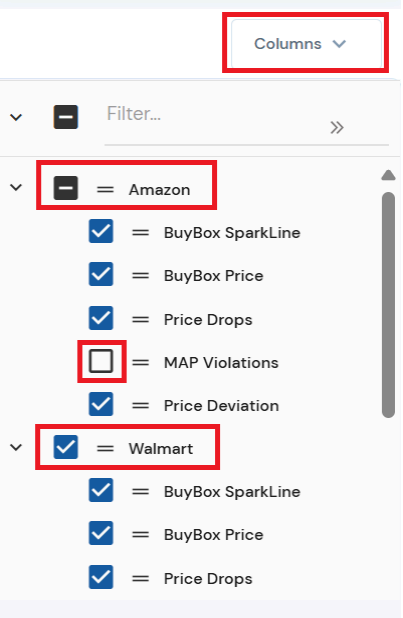


Choose to see/hide the sparkline using the **Show Spark Lines** toggle at the top right of the table.

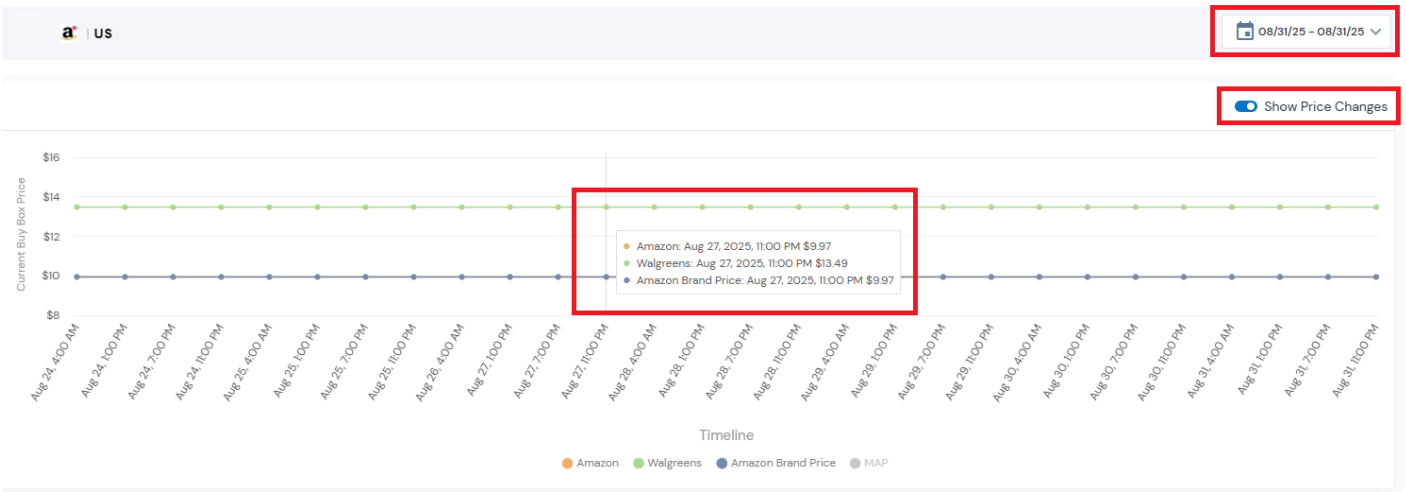
8. Hover over any Price Drops to get more details like so:



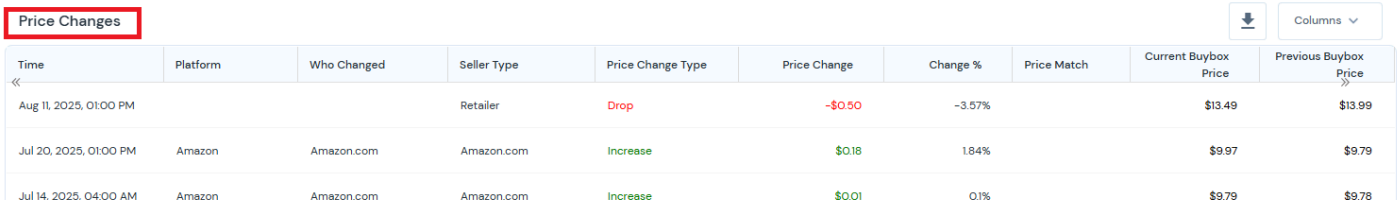
9. Click on the column dropdown to select/deselect marketplace details of your choice.



10. Click on the trending up icon next to any product to open the trend pop-up.
11. Select the desired time range within the pop-up.
12. In the trend pop-up, view the buy box price trend across marketplaces. Hover over data points to see the exact value for each day.



13. View the **Price Changes** table just below the chart.



Price Changes

Columns

Time	Platform	Who Changed	Seller Type	Price Change Type	Price Change	Change %	Price Match	Current Buybox Price	Previous Buybox Price
Aug 11, 2025, 01:00 PM			Retailer	Drop	-$0.50	-3.57%		$13.49	$13.99
Jul 20, 2025, 01:00 PM	Amazon	Amazon.com	Amazon.com	Increase	$0.18	1.84%		$9.97	$9.79
Jul 14, 2025, 04:00 AM	Amazon	Amazon.com	Amazon.com	Increase	$0.01	0.1%		$9.79	$9.78

14. Click Close to return to the Pricing screen.

> ⓘ Note: You can select a maximum of five marketplaces to display in the table at one time.

FAQs

Q: Can I monitor pricing across multiple marketplaces at the same time?
A: Yes, you can monitor up to **five marketplaces** simultaneously in the product details table.

Q: What does "Lowest Price Platform" mean?
A: Marketplace offering the lowest price for that specific product on the selected day.

Q: How do I know if I've lost the buy box due to pricing?
A: The **Lost Buy Box due to Price** KPI card displays the number of times a product lost the buy box due to a price drop, either by another seller or Amazon, on the selected day.

Q: What is a MAP violation and how is it tracked?
A: A **MAP (Minimum Advertised Price) violation** occurs when a product is listed below the brand's approved minimum price. i2o's Pricing tracks these violations across all enabled marketplaces and shows the count for each product.

Q: Can I filter pricing data by brand or region?
A: Yes, you can use the filter icon or quick filters on the Pricing screen.

Q: What does the sparkline in the product table show?
A: The sparkline displays a **7-day trend** of the buy box price for each marketplace. Hover over any point to see the exact date, time, and price.

Q: How many times is my product getting scraped?
A: Run the sparkline and see what are the timestamps on which your data got scraped.

Q: How can I export pricing data?
A: Click the **Download Detailed Report** button to export**.**

Q: Can I customize which marketplaces appear in the product table?
A: Yes, you can select which five marketplaces you'd like to view using the column dropdown.

Q: What does the "Monitored Platforms" card show?
A: It shows a number of all enabled platforms being monitored.
